Aircraft De-icing Services, Calgary

Aircraft De-icing Services

As part of our service delivery at Calgary International Airport, Inland Technologies Canada is offering a turnkey aircraft de-icing program to all YYC carriers. Inland owns and operates five, well-maintained de-icing trucks at YYC and will provide services on a 24/7 basis on any approved de-icing area, including Apron 2 [terminal], and Aprons 7, 9, and 10. Our culture prioritizes safety and customer service and we are committed to client satisfaction at YYC.

Training and Quality Assurance

As part of our service delivery, Inland has implemented robust management systems to ensure the needs of our carrier clients are met. We have a well-developed training program and highly trained staff. De-icing and anti-icing training is conducted in accordance with Transport Canada regulations as well as the air carrier's ground de-icing program. We have a quality assurance program covering all aspects of program delivery including safety, training, and accurate record keeping.

Inland de-icing trucks are available 24/7

Other Benefits

- All equipment is outfitted with GoPro® camera systems. Footage can be used for education, accountability, and as reference material.
- Open bucket trucks allow for quick tactile inspections.
- Staff have multiple years of experience.
- Ability to serve ad hoc clients.
- Other support services, such as security coverage, are available.

Contact

Inland has a 24-hour operations phone to serve our clients. We can be reached at 587.578.1445.
